

PEAKTIME

FOR PROMOTERS & TALENT BUYERS

Book the right names. Before you overpay.

A booking-intelligence tool for house & techno. Enter a budget and a city — get a lineup sized to your money, ranked by real demand in that market, with every fee benchmarked.

This is an early concept, and we'd love your feedback.

THE PROBLEM

A booking is a high-stakes guess

Every date is a five- to six-figure bet placed on instinct. You're negotiating against an agent who knows their artist's demand far better than you do, with no neutral benchmark to push back on the ask.

£50K–500K

at risk on a single night

1

source of truth on fair
price – the agent

0

tools that price demand
for *your* city

So the room either sells or it doesn't — and you find out the hard way.

Three expensive ways a booking goes wrong

OVERPAY

You pay festival money for club demand

The ask sounds reasonable because you have nothing to compare it to. No benchmark = no leverage.

UNDERDRAW

Big on Spotify, empty on the floor

Streaming numbers don't equal ticket demand in your city. The wrong signal sinks the night.

TOO LATE

You book the breakout after the fee spikes

The act everyone wants next season is bookable cheaply today — if you can see them coming.

PEAKTIME is built to remove all three.

Not a chart you read. A tool that decides.

We combine seven independent demand signals — streaming, Beatport charts, search interest, social, and touring — into one continuously updated index across 263 house & techno artists. Then we turn it into booking decisions.

”Give me a lineup for £100K in Amsterdam that will actually sell — and tell me if the quotes I’m getting are fair.”

That question used to take a week of calls. PEAKTIME answers it instantly.

Budget in. Lineup out.

Pick a budget and a market. We build a lineup sized to your money — a best-fit headliner plus support — ranked by projected demand **in that city**, with each fee shown against our benchmark and budget utilization tracked live.

DEMAND FIT

Local interest in Netherlands: 100/100

YOUR QUOTE (OPTIONAL)

£ 12000

WHY IT'S DIFFERENT

It books for *your* city — not global fame

The biggest name on Spotify isn't the biggest draw in every market. We rank by country-level demand, so the lineup changes with the city.

AMSTERDAM • £100K

Franky Rizardo

Netherlands demand 100/100, momentum +31%. Local Dutch acts headline.

LAS VEGAS • £100K

Chris Lake

Same budget, different market — the US-strong name rises to the top.

LONDON • £100K

ANOTR

UK demand reshuffles the bill again. One budget, three lineups.

Same money. Three cities. Three different right answers.

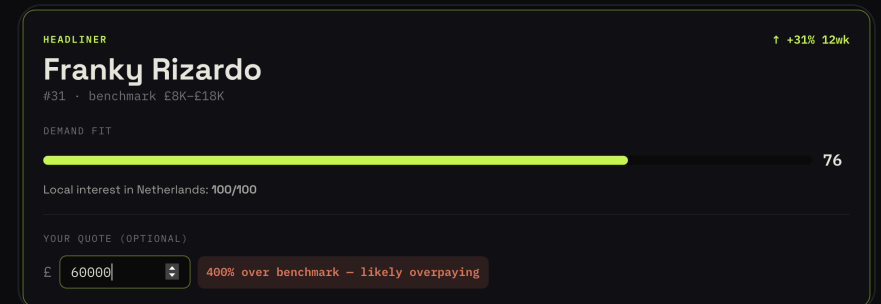

NEVER OVERPAY AGAIN

Benchmark every quote

Enter the fee an agent quotes you. PEAKTIME compares it to our curated market benchmark and tells you instantly whether you're getting a deal or being walked.

- > **Green** — below benchmark, good deal
- > **Red** — over benchmark, likely overpaying
- > **Neutral** — in line with the market

It's the leverage the buy side has never had.

BOOK BEFORE THE SPIKE

Catch the rising act while it's cheap

Every artist carries a 12-week momentum read. When demand is climbing faster than the fee has caught up to, that's your window — lock them now, before next season's price.

↑ **+31%**

Franky Rizardo · 12-week
search momentum

↑ **+140%**

ANOTR · accelerating
ahead of the fee

The momentum arrow on every act turns booking from a lagging decision into a leading one.

A booking rationale in one click

Every lineup generates a plain-English memo — the demand case, the fee-timing read, the budget math, and an honest caveat — ready to forward to a partner, a venue, or your own finance team.

AUTO-GENERATED RATIONALE

Amsterdam · £100K budget

Franky Rizardo anchors the bill: search demand in Netherlands is among the strongest in the field (100/100), so the headline slot is tightly matched to Amsterdam.

Momentum is climbing (+31% over 12 weeks), which typically precedes fee increases — locking them now likely beats next season's rate.

3 support acts (Joris Voorn, Seth Troxler, ANOTR) round out the night without stretching spend; Joris Voorn also indexes high locally (100/100).

At £96K, the lineup uses 96% of your £100K budget, leaving £4K for production, visuals, or a local opener.

These are demand estimates from public signals — search, streaming, charts, touring — not a ticket guarantee. Calibrate against your own on-sale history before committing.

Reach is not the same as a full room

A DJ can have millions of monthly listeners and not sell a 600-cap club — or be a Beatport institution that quietly sells out every night. We show both axes so you can tell them apart before you sign.

HIGH REACH · LOWER CREDIBILITY

The playlist artist

Streams big, but the demand may be passive. Great for broad bills, riskier as a club headliner.

HIGH CREDIBILITY · LOWER REACH

The DJ's DJ

Scene-respected, sells the room, often under-priced because the mainstream hasn't caught on.

Where this goes next

The features we're most excited to build with buyer input:

CALIBRATED

Sell-through prediction

Connect your on-sale history and we turn the demand estimate into a real ticket forecast for your venue.

ALERTS

Watchlists & breakout alerts

Track artists; get pinged the moment one crosses the breakout threshold — book before competitors notice.

ROUTING

Who's touring near your date

Surface artists already routed close to your city and window — cut fly-in costs and land the booking.

ASK

Natural-language search

"Techno DJs under £15K spiking in Berlin who haven't played my festival." Plain English in, shortlist out.

INTEL

Competitive booking signals

See where an artist is already playing nearby, so you don't oversaturate your market.

A/B

Lineup comparison

Pit two lineups against each other on demand fit and spend before you commit.

NO BLACK BOX

Transparent by design

We'll always show our work. Every score is a weighted blend of public, independent signals — refreshed daily — so you can trust the number and challenge it.

263

artists tracked

Streaming reach · Beatport chart credibility · search interest · social presence · touring density · catalog strength · scene reputation.

WE WANT YOUR READ

Would this change how you book?

This is an early build and you're exactly the person it's for. Tell us where it's wrong, what's missing, and what would make it a tool you'd actually open before a booking. That feedback shapes what we build next.
